

Here are the top two techniques and instructions for spraying Smart Wall Paint products.

## 1. Equipment Example - Airmix - Wagner Aircoat SF23

- ✓ Paint pressure: 120 bar
- ✓ Nozzle: 11 micro inch
- ✓ Angle: 40 degrees
- ✓ Air pressure: 2 bar
- ✓ Filter: red
- ✓ No thinning use undiluted

## 2. Conventional Spray gun Example - GTI pro lite (gravity feed à cup on top)

- ✓ Trans tech aircap
- ✓ 2.2 mm nozzle set
- ✓ Air pressure : 2 bar
- ✓ Dilute with thinner max 5% - Use a Xylene Thinner

## Spraying guidelines for Smart Wall Paint

- It's very important to spray enough thickness or the surface will end up with little pit holes.
- From past experiences, expect 20% - 30% material overuse due to overspray and paint in equipment.
- The advantage of Airmix is the fact the applicator does not have to dilute the paint.
- Equipment must be cleaned quickly after use as paint might set in the equipment.
